Overview of Economic Planning Studies

Executive Summary

The Regional Planning Stakeholder Group (“RPSG”) identified five (5) economic planning studies to be evaluated under the Southeastern Regional Transmission Planning (“SERTP”) process. The SERTP Sponsors have performed analyses to assess potential constraints on the transmission systems of the participating transmission owners for the stakeholder requested economic planning studies selected by the RPSG. The assessments include the identification of potentially limiting facilities, the impact of the transfers on these facilities, and the contingency conditions causing the limitations. The assessments also identify potential transmission enhancements within the footprint of the participating transmission owners necessary to accommodate the economic planning study requests, planning-level cost estimates, and the projected need-date for projects to accommodate the economic planning study requests. The information contained in this report does not represent a commitment to proceed with the recommended enhancements nor implies that the recommended enhancements could be implemented by the study dates. The assessment cases model the currently projected improvements to the transmission system. However, changes to system conditions and/or the transmission system expansion plans could also impact the results of this study. 1898 & Co. was contracted to perform the assessments and, along with sponsors, develop potential strategic solutions for these studies. The results are summarized in this report.

Study Assumptions

The specific assumptions selected for these evaluations were:

- Each request was evaluated for the year identified below, as selected by the RPSG
- The following economic planning studies were assessed:

1) MISO South/FRCC to SOCO – 4,000 MW

- Year: 2029
- Load Level: Summer Peak
- Type of Transfer: Generation to Generation
- Source: Generation within MISO South (2,000 MW) and FRCC (2,000 MW)
- Sink: Generation within SOCO

2) PJM to DEC/DEP – 2,000 MW

- Year: 2026
- Load Level: Summer Peak
- Type of Transfer: Generation to Generation
- Source: Generation within PJM
- Sink: Generation within DEC (1,000 MW) and DEP (1,000 MW)

3) MISO North to SOCO – 10,000 MW

- Year: 2034
- Load Level: Summer Peak
- Type of Transfer: Generation to Generation
- Source: Generation within MISO North
- Sink: Generation within SOCO

4) SPP/MISO North to AECI – 2,500 MW

- Year: 2029
- Load Level: Summer Peak
- Type of Transfer: Generation to Generation
- Source: Generation within SPP (1,000 MW) and MISO North (1,500 MW)
- Sink: Generation within AECI

5) DEC/SOCO to Santee Cooper – 2,400 MW

- Year: 2034
- Load Level: Winter Peak
- Type of Transfer: Load/Generation to Generation
- Source: Load within DEC (1,200 MW) and Generation within SOCO (1,200 MW)
- Sink: Generation within Santee Cooper

Case Development

- For all evaluations, the **2024 Series Version 1 SERTP Regional Models** were used as a starting point load flow cases for the analysis of the Economic Planning Scenarios. These models can be found on the Secure Area of the [SERTP website](#).

Study Criteria

The study criteria with which results will be evaluated will include each individual sponsors' planning criteria (voltage, thermal, stability, and short circuit) which is posted on the [SERTP website](#).

Methodology

Initially, power flow analyses were performed based on the assumption that thermal limits were the controlling limit for the reliability plan. Voltage, stability, and short circuit studies were performed if circumstances warranted.

Technical Analysis and Study Results

The technical analysis was performed in accordance with the study methodology. Results from the technical analysis were reported throughout the study area to identify transmission elements approaching their limits such that all participating transmission owners and stakeholders would be aware of any potential issues and, as such, suggest appropriate solutions to address the potential issues if necessary. The SERTP reported, at a minimum, results for monitored transmission elements within the participating transmission owners' footprint based on:

- Thermal loadings greater than 90% for facilities that are negatively impacted by the proposed transfers and change by +5% of applicable rating with the addition of the transfer(s)
- Voltages appropriate to each participating transmission owner's planning criteria (with potential solutions if criteria were violated)

Assessment and Problem Identification

1898 & Co. ran assessments to identify any constraints within the participating transmission owners' footprint as a result of the economic planning study requests. Each participating transmission owner applied their respective reliability criteria for its facilities and any constraints identified were documented and reviewed by each participating transmission owner.

Solution Development

- The participating transmission owners, with input from the SERTP stakeholders and 1898 & Co., will develop potential solution alternatives due to the economic planning studies requested by the RPSG.
- The participating transmission owners will test the effectiveness of the potential solution alternatives using the same cases, methodologies, assumptions and criteria described above.
- The participating transmission owners will develop general, planning-level cost estimates and in-service dates for the selected solution alternatives.

Report on the Study Results

The participating transmission owners compiled all the study results and prepared a report for the SERTP stakeholder review. The report contains the following:

- A description of the study approach and key assumptions for the Economic Planning Scenarios
- For each economic planning study request, the results of that study including:
 1. Limit(s) to the transfer
 2. Selected solution alternatives to address the limit(s)
 3. General, planning-level cost estimates and in-service dates for the selected transmission solution alternatives

Table I.4. Potential Solutions for Identified Problems

The following table lists any potential solutions that were identified to address the attributable constraints based on the assumptions used in this study and would have an estimated need date of the year of this study. It must be noted that changes to the load forecast, and/or changes in the expansion plan could occur and would impact the results of this study. In addition, the currently projected improvements to the transmission system were modeled in the cases. Changes to system conditions and/or the transmission expansion plans could also impact the results of this study.

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|-----------------------|--|------|---------------------------------|
| P1 | Upgrade the jumper at the Charleston 161kV substation. | TVA | \$321,000 |
| TOTAL (\$2024) | | | \$321,000 ⁽¹⁾ |

(1) Total planning level cost estimate does not include the cost of projects that are included in SERTP Sponsors' expansion plans and are scheduled to be completed by June 1st of the study year. The studied transfer depends on these projects being in-service, and the cost to support the study transfer could be greater than the total shown above if any of these projects are delayed or cancelled.

Notes:

*All projects marked with an asterisk are addressed by existing projects that will be included in the 2024 Final Expansion Plan.

**New constraints driven by P1

Table III.3. Pass 1 – Potential Future Transmission System Impacts

The following table depicts thermal loadings of **SERTP** transmission facilities that could become potential constraints in future years or with different queuing assumptions but are not overloaded in the study year with all proposed enhancements to the transmission system.

Notes:

*All projects marked with an asterisk are addressed by existing projects that will be included in the 2024 Final Expansion Plan.

Table III.4. Potential Solutions for Identified Problems

The following table lists any potential solutions that were identified to address the attributable constraints based on the assumptions used in this study and would have an estimated need date of the year of this study. It must be noted that changes to the load forecast, and/or changes in the expansion plan could occur and would impact the results of this study. In addition, the currently projected improvements to the transmission system were modeled in the cases. Changes to system conditions and/or the transmission expansion plans could also impact the results of this study.

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|------|---|--|---|
| P1 | (1) Build a new 110 mile, 500kV line from New South Hall – Hiwassee 500kV (SBAA – TVA) <ul style="list-style-type: none"> a. SOCO portion will be 55miles with 3-1113 ACSR rated for 100C b. TVA portion will be 55 miles (2) Build a new 75 miles, 500kV line from Widows Creek – Mosteller Springs 500kV (TVA – SBAA) <ul style="list-style-type: none"> a. SOCO portion will be 37.5 miles with 3-1113 ACSR rated for 100C b. TVA portion will be 37.5 miles (3) Build a new 220 mile, 500kV line from Newport - East Walton 500kV (DEC – SBAA Portion) <ul style="list-style-type: none"> a. SOCO portion will be 110 miles with 3-1113 ACSR rated for 100C b. DEC portion will be bundled 2505 ACSR rated at 120°C (4) Build a new 27 mile, 500kV line with 3-1113 ACSR rated for 100C from Klondike – East Walton 500kV (SBAA) (5) Build a new 14 mile, 500kV line with 3-1113 ACSR rated for 100C from McGrau Ford – Norcross 500kV (SBAA) | SBA A D E C T V A | \$1,530,593,000 \$1,207,500,000 \$426,500,000 |
| P2 | Rebuild 2.68 miles of the Tiger Tie to East Greenville Tie 100 kV Transmission Lines with 1272 ACSR rated at 120°C | DEC | \$10,720,000 |
| P3 | Rebuild 29.62 miles of the Cliffside 5 to Campobello Tie 100 kV Transmission Lines with 954 ACSR rated at 120°C | DEC | \$118,480,000 |
| P4 | Rebuild 21.16 miles of the Cliffside 5 to Tiger Tie 100 kV Transmission Lines with 954 ACSR rated at 120°C | DEC | \$84,640,000 |
| P5 | Rebuild 19.20 miles (Full line rebuild) of the Peach Valley to Riverview 230 kV Transmission Lines 1158 ACSS/TW rated at 200°C | DEC | \$96,000,000 |
| P6 | Rebuild 4.77 miles of the Cliffside 5 to Peach Valley 100 kV Transmission Lines with 954 ACSR rated at 120°C | DEC | \$19,080,000 |

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|------|--|------|---------------------------------|
| P7 | Rebuild 5.43 miles of the Lookout Tie to Stamey Tie 100 kV Transmission Lines with bundled 954 ACSR rated at 120°C | DEC | \$21,720,000 |
| P8 | Rebuild 7.88 miles of the Orchard Tie to Lincolnton Tie 100 kV Transmission Lines with 1272 ACSR rated at 120°C | DEC | \$31,520,000 |
| P9 | Rebuild/Reconductor 1500' of the Woodlawn to Wylie Switching Station 100 kV Transmission Lines with 1272 ACSR rated at 120°C | DEC | \$1,200,000 |
| P10 | Upgrade the Mitchel River Tie terminals of the Mitchel River Tie to Bannertown Tie 100 kV Transmission Lines | DEC | \$1,000,000 |
| P11 | Upgrade terminals at customer station along the Shattalon Switching Station to Winston Tie 100 kV Transmission Line to improve the line rating | DEC | \$1,000,000 |
| P12 | Rebuild 3.26 miles of the Durham Main to Ashe St 100 kV. Because of the configuration of the 100 kV lines in the area, this rebuild will include rebuilds of 1.35 miles of the Durham Main to E Durham Tie and 1.91 miles of the E Durham Tie to Ashe St 100 kV Transmission Lines. Any new conductor will be 1272 ACSR rated at 120°C | DEC | \$13,000,000 |
| P13 | Upgrade the Oconee Terminal of the Oconee to South Hall 500 kV T.L. | DEC | \$10,000,000 |
| P14 | Rebuild 5.3 miles of the Winecoff Tie to Conley Switching Station 100 kV Transmission Lines with 1272 ACSR rated at 120°C | DEC | \$21,200,000 |
| P16 | Rebuild 19.2 DEP miles of the Henderson - VP Kerr Dam 115 kV Line with 795 ACSS/TW (313 MVA) ² | DEPE | \$76,800,000 |
| P17 | Rebuild 8.51 DEP miles of the Rocky Mount - VP Battleboro 115 kV Line with 6-795 ACSS/TW (626 MVA) ² | DEPE | \$34,040,000 |
| P18 | Rebuild 4.73 DEP miles of the Rocky Mount - VP Hathaway 230 kV East Line with 6-1590 w/ 3kA equipment (1195 MVA) ² | DEPE | \$23,650,000 |
| P19 | Rebuild 4.44 DEP miles of the Rocky Mount - VP Hathaway 230 kV West Line with 6-1590 w/ 3kA equipment (1195 MVA) ² | DEPE | \$22,200,000 |

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|------|---|------|---------------------------------|
| P20 | Rebuild 2.5 miles of the Falls - Franklinton 115 kV West Line with 795 ACSS/TW (313 MVA) | DEPE | \$10,000,000 |
| P21 | Rebuild 7.11 miles of the Rocky Mount - Spring Hope SS 115kV Line with 795 ACSS/TW (313 MVA) | DEPE | \$28,440,000 |
| P22 | Rebuild 6.98 miles of the Rocky Mount - Wilson 115kV Line with 6-1272 ASCSR (541 MVA) | DEPE | \$27,920,000 |
| P23 | Rebuild 12.79 miles of the Rocky Mount - Wilson 230kV Line with 6-1590 w/ 3kA equipment (1195 MVA) | DEPE | \$63,950,000 |
| P24 | Rebuild 3.8 miles of the Weatherspoon Plant - Marion 115kV Line with 795 ACSS/TW (313 MVA) | DEPE | \$15,200,000 |
| P25 | Add a second 500/230kV, 2016MVA transformer at the South Hall 500/230kV substation. | SBAA | \$32,000,000 |
| P26 | Rebuild 3.52 miles between Bull Sluice and Sandy Springs of the Bull Sluice-Powers Ferry 230kV line with 200C 1351 ACSS conductor and replace limiting elements. | SBAA | \$12,750,000 |
| P27 | Rebuild 3.09 miles between Winder Primary and Winder of the South Hall - Winder Primary 230kV line with 200C 1351 ACSS conductor and replace limiting elements. | SBAA | \$14,505,000 |
| P28 | Rebuild of the South Hall-Winder Primary 230kV line approximately 17 miles with 200C 1351 ACSS conductor and replace limiting elements along the line. | SBAA | \$70,000,000 |
| P29 | Rebuild the Evans Primary-Thurmond Dam (USA) #5 115kV line from Evans to Euchee Creek (3.5 miles) with 200C 1351 ACSS conductor and replace limiting elements in substations. | SBAA | \$6,000,000 |
| P32 | Replace 2 4000A 230kV bus tie breakers with 5000A at South Hall. | SBAA | \$1,216,000 |
| P33 | Upgrade the jumper and bus work at the N Bristol VA 138kV substation | TVA | \$449,000 |
| P34 | Reconduct 0.46 miles of the BR Tap – Paradise KY 161kV transmission line with 1351 ACSS conductor | TVA | \$200,000 |

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|--------------------|--|------|---------------------------------|
| P35 | Construct a new Murray 500/161kV station along the Marshall - Cumberland 500 kV line. Construct a new Weakly – Shawnee 500kV line (62.5 miles). Construct a new Gleason – Murray 500kV line (35 miles) | TVA | \$534,762,000 |
| P36 | Upate the jumper at the Guntersville, AL Primary 161kV substation | TVA | \$321,000 |
| P37 | Reconductor 5.1 miles of the Maury, TN – Monsanto, TN 161kV transmission line with 795 ACSS conductor. Upate the jumper and bus work at the Monsanto, TN 161kV substation | TVA | \$2,670,000 |
| P38 | Reconductor 3.87 miles of the Interchange City, TN – Hurricane Creek, TN 161kV transmission line with 954 ACSS conductor. | TVA | \$1,818,000 |
| P39 | Upate the jumper at the Hopkinsville, KY 161kV substation | TVA | \$321,000 |
| P40 | Reconductor 5.22 miles of the John Sevier FP – Persia, TN 161kV transmission line with 696 ACSS conductor. Upate the jumper and secondary equipment and reverse trip settings at the John Sevier FP 161kV substation | TVA | \$2,722,000 |
| P41 | Reconductor 17.84 miles of the West Green, TN Tap – Greenville Tap 161kV transmission line with 636 ACSS conductor. | TVA | \$8,381,000 |
| P42 | Reconductor 5.69 miles of the West Green, TN Tap – Greenville Tap 161kV transmission line with 696 ACSS conductor. | TVA | \$2,673,000 |
| P43 ⁽³⁾ | Install a third 2016 MVA 500/230kV autobank at Norcross | SBAA | \$32,000,000 |
| P44 ⁽³⁾ | Rebuild 1.55 mile of line from 100C 636 ACSR to 200C 1351 ACSS on Oakwood GA – Chicopee 115kV | SBAA | \$2,700,000 |
| P45 ⁽³⁾ | Rebuild 3.16 mile of line from 100C 636 ACSR to 200C 1351 ACSS on Chicopee - Gainesville #2 115kV | SBAA | \$5,400,000 |
| P46 ⁽³⁾ | Rebuild 1.48 mile of line from 100C 636 ACSR to 200C 1351 ACSS on Gainesville #2 – Eureka J 115kV | SBAA | \$2,700,000 |

| Item | Potential Solution | Area | Planning Level Cost Estimate |
|-----------------------------|--|------|--------------------------------------|
| P47 ⁽³⁾ | Rebuild 1.7 mile of line from 100C 636 ACSR to 200C 1351 ACSS on Parkway Ga – Gainesville #2 115kV | SBAA | \$3,000,000 |
| P48 ⁽³⁾ | Rebuild 1.7 mile of line from 100C 636 ACSR to 200C 1351 ACSS on Park way GA – South Gainesville 115kV | SBAA | \$1,300,000 |
| P49 ⁽³⁾ | Replace 2 285 MVA 230\115kV banks with 400 MVA banks at Norcross | SBAA | 6,000,000 |
| P50 ⁽³⁾ | Replace two 3000A breakers with (2) 4000A at South Hall | SBAA | \$1,220,000 |
| SERTP TOTAL (\$2024) | | | \$4,614,206,000⁽¹⁾ |

- (1) Total planning level cost estimate does not include the cost of projects that are included in SERTP Sponsors' expansion plans and are scheduled to be completed by June 1st of the study year. The studied transfer depends on these projects being in-service, and the cost to support the study transfer could be greater than the total shown above if any of these projects are delayed or cancelled.
- (2) Only DEPE miles are listed for tie lines. Neighboring utility may list their own constraints, upgrades, and costs if applicable.
- (3) Additional projects driven by strategic projects

4. Study Request 4 Results

SPP/MISO North to AECI - Summer 2029
2,500 MW

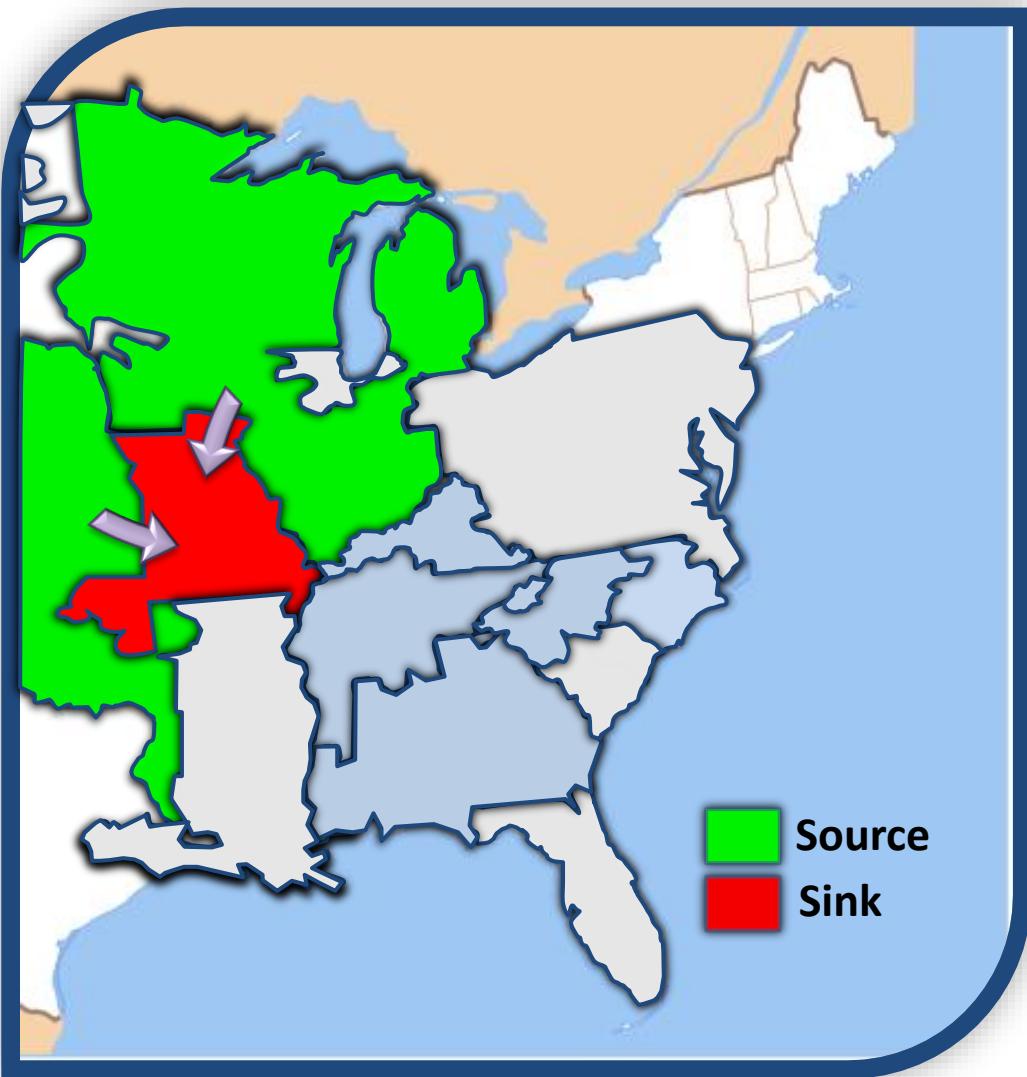

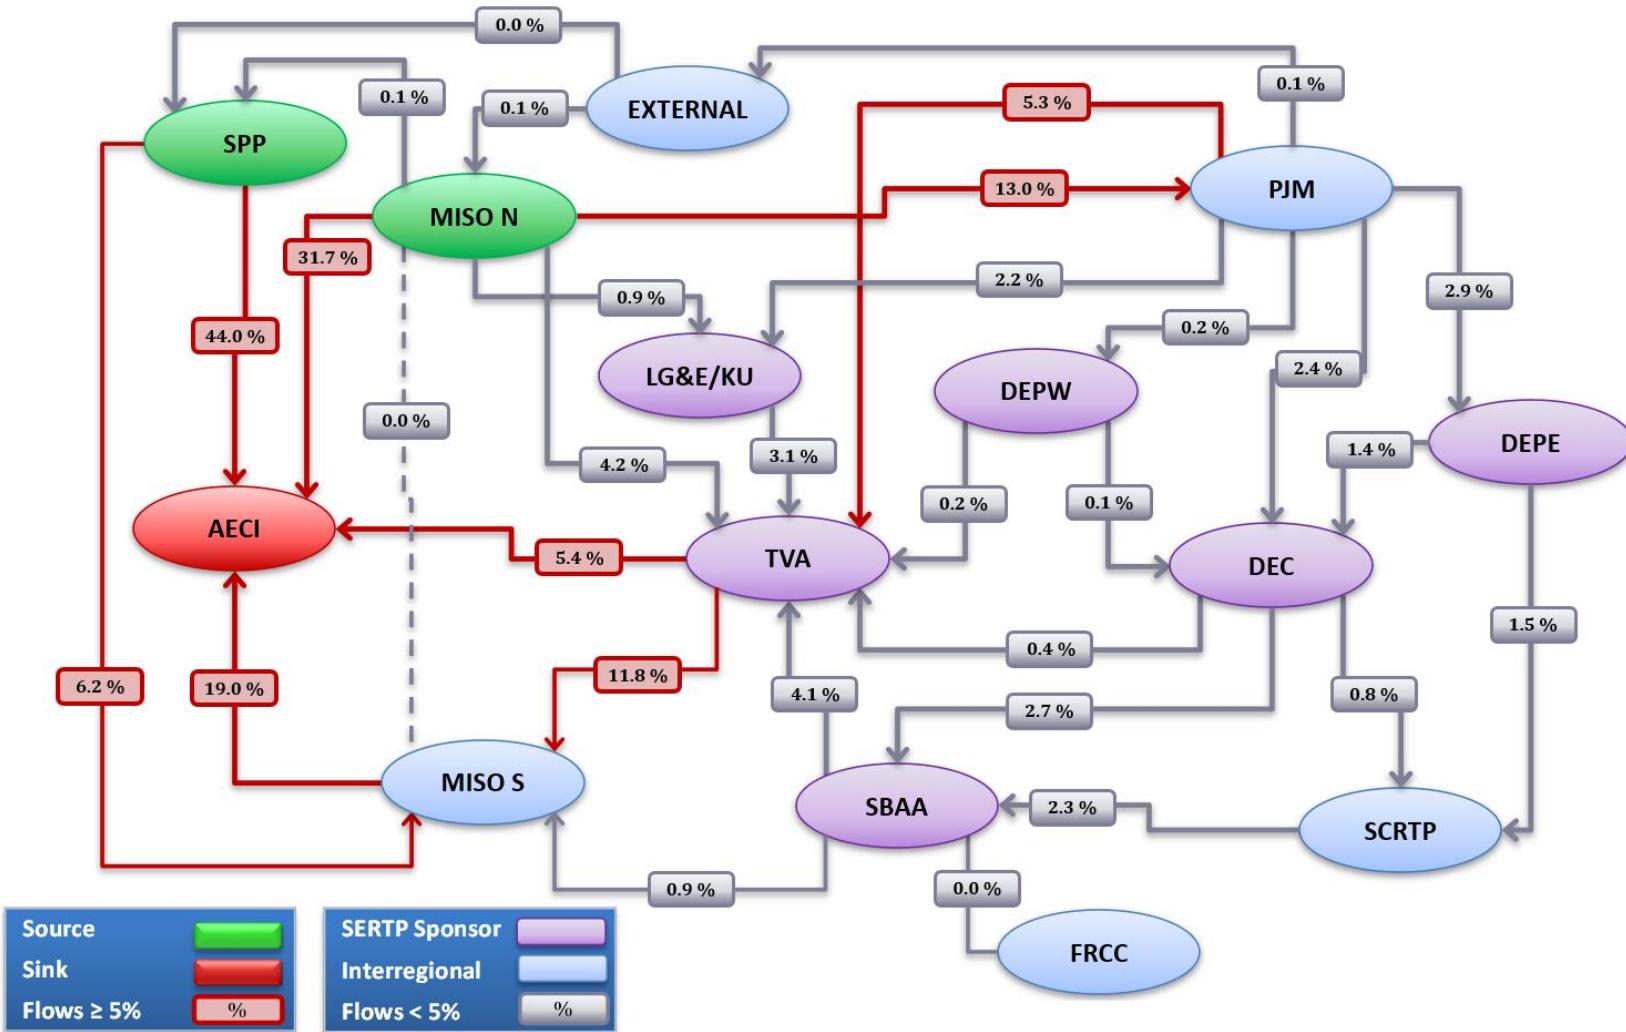

Table IV.1. Total Cost Identified by the SERTP Sponsors

| Balancing Authority Area | Planning Level Cost Estimate |
|--|---------------------------------|
| Associated Electric Cooperative (AECI) | \$0 |

Transmission System Impacts

The following tables below identify any constraints attributable to the requested transfer for the contingency that resulted in the most significant loadings for the conditions studied. These constraints could be seen for other contingencies.

Table IV.2. Pass 0 – Transmission System Impacts with No Enhancements

The following table identifies significant **SERTP** thermal constraints without any enhancements to the transmission system. Any constraints that have known operating procedures were not included since those would not be considered attributable.

| Area | Limiting Element | Rating (MVA) | Thermal Loadings (%) | | Contingency | Project |
|------|------------------|--------------|----------------------|--------------|-------------|---------|
| | | | Without Request | With Request | | |
| -- | -- | -- | -- | -- | -- | -- |

Table IV.3. Pass 1 – Potential Future Transmission System Impacts

The following table depicts thermal loadings of **SERTP** transmission facilities that could become potential constraints in future years or with different queuing assumptions but are not overloaded in the study year with all proposed enhancements to the transmission system.

| Area | Limiting Element | Rating (MVA) | Thermal Loadings (%) | | Contingency |
|------|------------------|-----------------|----------------------|-----------------|-------------|
| | | | Without Request | With Request | |
| -- | -- | -- | -- | -- | -- |

Table IV.4. Potential Solutions for Identified Problems

The following table lists any potential solutions that were identified to address the attributable constraints based on the assumptions used in this study and would have an estimated need date of the year of this study. It must be noted that changes to the load forecast, and/or changes in the expansion plan could occur and would impact the results of this study. In addition, the currently projected improvements to the transmission system were modeled in the cases. Changes to system conditions and/or the transmission expansion plans could also impact the results of this study.

|-----------------------------|---|------|------------------------------------|
| P2 | Upgrade Florence 230 kV Sub 115 kV bus tie breaker, including switches and CT ratio | DEPE | \$2,000,000 |
| P3 | Upgrade relay settings to get 336 MVA rating for Florence 230/115kV transformer #2 | DEPE | \$1,000,000 |
| P4 | Install a second 400MVA 230/115kV auto transformer at McIntosh substation. | SBAA | \$7,225,000 |
| SERTP TOTAL (\$2024) | | | \$10,225,000 ⁽¹⁾ |

(1) Total planning level cost estimate does not include the cost of projects that are included in SERTP Sponsors' expansion plans and are scheduled to be completed by June 1st of the study year. The studied transfer depends on these projects being in-service, and the cost to support the study transfer could be greater than the total shown above if any of these projects are delayed or cancelled.
